

1. Waste Management and Environmental Restoration @ 12" Imo River 1 and 2-Ogale Pipeline, Kom-Kom

As part of the measures in restoring the environment to its original state, Giolee Global Resources Ltd carried out waste management of dead logs in the above sites post remediation. A grinder was used rather than controlled burning to effectively manage a large volume of waste generated from a remediation. The project was carried out for SPDC Nigeria from 15/04/2013 to 16/05/2013.

Heap of tree logs after remediation

Mechanical excavation

Impacted vegetation

Preparation of dead logs for grinding

Preparation of dead logs for grinding

Grinding of dead logs into saw dust with grinder
